PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience shipping production-ready apps across the stack — a secure REST API with JWT auth and rate limiting, an AI-powered recommendation engine with a real taste graph, a food delivery app with 90%+ test coverage, and a book discovery platform with optimized API performance. Self-directed learner backed by a 300+ day consistent GitHub streak and 100+ days of structured DSA practice, with strong fundamentals in data structures, algorithms, responsive design, and performance optimization.

PROJECTS

- TaskForge API** | *Node.js, Express, MongoDB, JWT, Zod* | **Live Demo** | API Docs 2026
- Built a secure REST API with JWT authentication, bcrypt password hashing, and Zod validation middleware; enforced per-user data isolation with ownership-scoped MongoDB queries preventing cross-user access.
 - Implemented task CRUD with query-based filtering, sorting, and pagination, plus interactive Swagger/OpenAPI documentation for all endpoints.
 - Hardened the API with Helmet security headers, IP-based rate limiting (100 req/15 min), CORS policy, and centralized error handling; deployed on Render via infrastructure-as-code blueprint with health-check monitoring.
- Cinegraph – AI Recommendation Engine** | *React 19, Redux Toolkit, Gemini API* | **Live Demo** 2026
- Built a full-featured SPA with a custom design system, using React 19, custom hooks, reusable components, and Redux Toolkit for state management.
 - Integrated TMDB API + Google's Gemini API for personalized, multi-turn AI search (proxied through a Cloudflare Worker so the key never reaches the client), computing a real taste profile from user ratings to personalize results.
- BiteSwift – Food Delivery Platform** | *React.js, Auth0, React Testing Library, Vitest* | **Live Demo** 2025
- Built a responsive food delivery app with dynamic homepage, search, and cart, choosing Auth0 over a custom auth flow to offload security to a battle-tested provider.
 - Achieved 90%+ test coverage with React Testing Library and Vitest, treating tests as a core part of the build, not an afterthought.
 - Optimized load time via lazy loading and sessionStorage caching, refining navigation based on manual usability testing across devices.
- BookVerse – Book Discovery Platform** | *React.js, Tailwind CSS, Firebase* | **Live Demo** 2025
- Built a fast, mobile-first book discovery platform with memoized API calls to keep repeat searches snappy, achieving **98% mobile responsiveness**.
 - Implemented lazy loading with shimmer placeholders and reusable custom hooks (`useBooks`, `useTrendingBooks`) for clean state management.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3
Frontend: React.js (v19), Redux Toolkit, React Router, Custom Hooks
UI & Styling: Tailwind CSS, Responsive Design, CSS Flexbox/Grid
APIs & Backend: REST APIs, Fetch API, Firebase, Node.js, Express.js, MongoDB
Testing & Performance: React Testing Library, Vitest, Jest, Memoization, Lazy Loading, Code Splitting
Tools: Git, GitHub, npm, Webpack, Babel, Parcel, Auth0

EDUCATION

Lovely Professional University Punjab, India
B.Tech in Computer Science & Engineering – CGPA: 7.01 Oct 2020 – Jul 2024

Tulsi Vidya Niketan Varanasi, India
Higher Secondary (CBSE Board) – 83% Mar 2018 – Jul 2020

CERTIFICATIONS

- Data Structures and Algorithms – Self Paced** – GeeksforGeeks Jul 2022
- Server-side JavaScript with Node.js** – Coursera May 2023
- Introduction to Programming Using Java** – Coding Ninjas May 2022
- The Complete 2023 Web Development Bootcamp** – Udemy Jul 2023
